

North American Institute of Orthopaedic Manual Therapy

The North American Institute of Orthopaedic Manual Therapy Inc. (NAIOMT) is an educational organization dedicated to achieving the highest standards of clinical practice for Manual Physical Therapists.

Our History

The NAIOMT program evolved out of the Canadian system, which had its roots in Cyriax and Kaltenborn-Evjenth, and then embraced “the best” from the international world of manual physical therapy and osteopathic manual therapy, to become a dynamic eclectic program.

NAIOMT strongly supports the union of the clinician, academician and researcher to further facilitate the development of quality care and education.

Our Faculty

Internationally recognized senior faculty in Canada and the U.S., highly experienced faculty, and clinical fellowship instructors who are all experienced practicing clinicians. The majority of faculty is a Fellow of the Canadian or the American Academy of Orthopedic Manual Therapy (CAMT or AAOMPT).

NAIOMT Goals and Objectives

- To assist the new or experienced orthopaedic physical therapist in the acquisition and application, enhancement, synthesis and evaluation of knowledge and skills, in manual and manipulative therapy.
- To advocate and assist research and outcome measurements relative to orthopaedic manual therapy.
- To promote the use of orthopaedic manual physical therapy in the United States as a safe, effective and efficient intervention.

NAIOMT offers licensed Physical Therapists:

**Continuing Education
Manual Therapy Certification
Fellowship Program
Credits toward Post Professional Degrees**
